- Plastics
- Rubber
- Aluminum
- Stainless Steel

UID is mandated by the DoD and provides an indelible method in giving equipment an unique ID. Any item with a cost over \$5,000, mission related or part of a controlled consumable. LMG provides a valuable service to customers needing the assurance of setting data for those material assets that are globally unique. LMG provides a turnkey service for marking, verifying, tracking and reporting back to you including material, design and shipping—all inclusive.

LMG Technologies was established solely to providing quality marking, welding, cutting, traceability solutions, integration and engraving services to a wide range of applications. As a small company and military contractor LMG works closely with their customers to achieve their quality marking expectations.

Backed up by over 16 years in the laser industry and working knowledge in manufacturing and traceability, LMG represents a broad range of industrial products, 2D Direct Part Marking Solutions and contract services or consulting and laser safety.

We invite you to contact us and explore further how our expertise can help you address your production and automation challenges. Call or email us to get further information for your project.
